

e-BRIDGE Job Point eX

- Increase your productivity by splitting large print jobs and printing simultaneously on several Toshiba e-STUDIO devices
- Combine the output speed of up to ten Toshiba MFPs to accelerate your efficiency
- Print on any Toshiba e-BRIDGE MFP in the network by sending your print job to multiple destinations with just one click
- Benefit from the advantages of e-BRIDGE JobPoint eX via the easy-to-use Toshiba Universal Printer Driver

Time-saving, easy-to-use rapid output software

Large print jobs can be a challenge, even for high-volume printers. With Toshiba's e-BRIDGE Job Point eX you can easily increase your productivity by printing on up to ten Toshiba devices at the same time. This multiplies your print speed by ten for fast and efficient document output.

e-BRIDGE Job Point eX integrates into the easy-to-access Toshiba Universal Printer Driver and increases its functionality. The software automatically detects all Toshiba MFPs within a network and is capable of splitting a print job across various devices. The copies are then printed on these systems at the same time, significantly reducing the time needed to finish a large print job.

Of course, you also have the possibility to decide yourself how many sets should be printed on which device. With the easy to use dialogue box you can simply allocate the number of sets to be printed to each device. This feature is extremely advantageous if the same document needs to be printed at different locations at the same time. Instead of sending a file to different people, who then all have to print the required number of copies, e-BRIDGE Job Point eX lets one person do this job irrespective of the location.

Print when and where you want

Even if you do not need to print multiple sets, the Toshiba e-BRIDGE Job Point eX will help you increase your efficiency. The sophisticated software is capable of sending your print job with all output settings to several devices at the same time. Thanks to the "hold" or "private" print function in the universal printer driver, you can then decide at which device you want to print. Once you have printed your documents, the print job will be deleted from all other devices according to the respective systems' settings.

This software is available for a 30-day trial period at www.toshibamedia.com/software/e-BRIDGEJobPointeXNode.zip

SYSTEM REQUIREMENTS

e-BRIDGE Job Point eX works on all Toshiba MFPs featuring the Universal Printer Driver 2/PS3/XPS v7.49.1733.0 or higher.
